BayTet (Tetanus Immune Globulin (Human) Solvent/Detergent Treated 250 Units)

??? ??????: 30 ?????2/?????? 2017

Slight soreness at the site of injection and slight temperature elevation may be noted at times. Sensitization to repeated injections of human immunoglobulin is extremely rare.

In the course of routine injections of large numbers of persons with immunoglobulin there have been a few isolated occurrences of angioneurotic edema, nephrotic syndrome, and anaphylactic shock after injection.
