Demeclocycline HCl (Declomycin)

??? ??????: 30 ?????2/????? 2017

The following reactions have been reported in patients receiving tetracyclines:

Gastrointestinal: Anorexia, nausea, vomiting, diarrhea, glossitis, dysphagia, enterocolitis, pancreatitis and inflammatory lesions (with monilial overgrowth) in the anogenital region, increases in liver enzymes, and hepatic toxicity has been reported rarely.

Rarely, hepatitis and liver failure have been reported. These reactions have been caused by both the oral and parenteral administration of tetracyclines.

Instances of esophageal ulcerations have been reported in patients receiving oral tetracyclines. Most of the patients were reported to have taken the medication immediately before lying down. (See **DOSAGE AND ADMINISTRATION**)

- Maculopapular and erythematous rashes, erythema multiforme. Exfoliative dermatitis has been reported but is uncommon. Fixed drug eruptions and Stevens-Skin: ohnson syndrome have been reported rarely. Lesions occurring on the glans penis have caused balanitis. Pigmentation of the skin and mucous membranes has been reported rarely. (See **WARNINGS**)

WARNINGS Acute renal failure. Rise in BUN has been reported and is apparently dose related. Nephrogenic diabetes insipidus. (See **Renal toxicity:**)

Urticaria, angioneurotic edema, polyarthralgia, anaphylaxis, anaphylactoid purpura, pericarditis exacerbation of systemic lupus **Hypersensitivity reactions:** erythematous, lupus-like syndrome, pulmonary infiltrates with eosinophilia.

Hemolytic anemia, thrombocytopenia, neutropenia and eosinophilia have been reported. **Hematologic:**

). Dizziness, headache, **General – PRECAUTIONS** (benign intracranial hypertension) in adults and bulging fontanels in infants (see *Pseudotumor cerebri* **CNS:** tinnitus, and visual disturbances have been reported. Myasthenic syndrome has been reported rarely.

When given over prolonged periods, tetracyclines have been reported to produce brown-black microscopic discoloration of thyroid glands. No abnormalities of **Other:** thyroid function studies are known to occur. Very rare cases of abnormal thyroid function have been reported.

), and has been reported rarely in adults. **WARNINGS** Tooth discoloration has occurred in pediatric patients less than 8 years of age (see
