Emgel (Erythromycin)

??? ??????: 30 ?????2/????? 2017

The most common adverse reaction reported with EMGEL (erythromycin) Topical Gel was burning. The following have been reported occasionally: peeling, dryness, itching, erythema, and oiliness. Irritation of the eyes and tenderness of the skin have also been reported with the topical use of erythromycin. A generalized urticarial reaction, which was possibly related to the use of erythromycin and required systemic steroid therapy, has been reported.
